DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I: a pixel cell comprising a strained silicon layer at an upper portion of a substrate and a photosensor.

Species II: a pixel cell comprising a strained silicon layer at an upper portion of a substrate and a photosensor, a reset transistor, a source follower transistor, and a row select transistor.

Species III: a pixel cell comprising a strained silicon layer at an upper portion of a substrate and a photosensor, a reset transistor, a source follower transistor, a row select transistor, and a transfer transistor.

Species IV: an imager comprising a plurality of pixel cells, at least one pixel cell comprising a strained silicon layer at an upper portion of a substrate and a photosensor.

Species V: a processing system comprising a processor, an imaging device coupled to the processor, a strained silicon layer at an upper portion of a substrate and a photosensor, and a readout circuit.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fetsum Abraham whose telephone number is 703-305-3793. The examiner can normally be reached on 8-5.

Comment

The method claim 39 as is, is not expected to provide additional burden of examination on the examiner in view of no specific method applied in forming the claimed structure pieces unless amended to be otherwise.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Flynn Nathan can be reached on 571-272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
